2015 Consumer Confidence Report Parkway Lakes RV Park June 23, 2016

We test the drinking water quality for many constituents as required by state and federal regulations. This report shows the results of our monitoring for the period of January 1 – December 31, 2015.

Este informe contiene información muy importante sobre su agua potable. Tradúzcalo ó hable con alguien que lo entienda bien.

Type of water source: The water used by Parkway Lakes RV Park consists of one ground water well. The well is located on Monterey Highway in Morgan Hill.

Drinking Water Source Assessment: The assessment of the source was not available at the time of this report.

For more information, contact: MCSI Water Systems Management Phone: (831) 659-5360

TERMS USED IN THIS REPORT

Maximum Contaminant Level (MCL): The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.

Maximum Contaminant Level Goal (MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. Environmental Protection Agency (USEPA).

Public Health Goal (PHG): The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

Maximum Residual Disinfectant Level (MRDL): The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG): The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Primary Drinking Water Standards (PDWS): MCLs and MRDLs for contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements.

Secondary Drinking Water Standards (SDWS): MCLs for contaminants that affect taste, odor, or appearance of the drinking water. Contaminants with SDWSs do not affect the health at the MCL levels.

Treatment Technique (TT): A required process intended to reduce the level of a contaminant in drinking water.

Regulatory Action Level (AL): The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

Variances and Exemptions: State Board permission to exceed an MCL or not comply with a treatment technique under certain conditions.

ND: not detectable at testing limit

ppm: parts per million or milligrams per liter (mg/L)

ppb: parts per billion or micrograms per liter (ug/L)

ppt: parts per trillion or nanograms per liter (ng/L)

ppq: parts per quadrillion or picogram per liter (pg/L)

pCi/L: picocuries per liter (a measure of radiation)

The sources of drinking water (both tap and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- *Microbial contaminants*, such as viruses and bacteria that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- *Inorganic contaminants*, such as salts and metals, that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides, that may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, that are byproducts of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, agricultural application and septic systems.
- Radioactive contaminants, that can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, the U.S. Environmental Protection Agency (USEPA) and the State Water Resources Control Board (State Board) prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. State Board regulations also establish limits for contaminants in bottled water that provide the same protection for public health.

Water Quality Data Tables

The tables below list all of the drinking water contaminants that we detected during the most recent sampling for the constituent. The presence of contaminants in the water does not necessarily indicate that the water poses a health risk. The State Board allows us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of the data, though representative of the water quality, are more than one year old.

SAMPLING RESULTS SHOWING THE DETECTION OF COLIFORM BACTERIA								
Microbiological Contaminants (units)	Highest # Detected in a Month	# Of Months in Violation	MCL	MCLG	Typical Source			
Total Coliform, Bacteria	0	0	More than 1 sample in a month with a detection	0	Naturally present in the environment			
Fecal Coliform/E coli	0	0	A routine sample and repeat sample detect total coliform and either sample also detects fecal coliform or E. coli	0	Human & animal fecal waste			

SAMPLING RESULTS SHOWING THE DETECTION OF LEAD AND COPPER										
Contaminant(s) (units)	PHG	AL	# of Samples taken	90 th Percentile Level Detected	# of Samples > Al	Sample Date	Typical Source			
Copper (ppm)	0.17	1.3	5	0.108	0	9/30/14	Erosion of natural deposits; leaching from wood preservatives; internal corrosion of household plumbing systems			
Lead (ppb)	0.2	15	5	ND	0	9/30/14	Internal corrosion of household systems; erosion of natural deposits			

SAMPLING RESULTS SHOWING THE DETECTION OF RADIOACTIVITY												
Contaminant(s) (units) PHG/ (MCLG) AL Level Detected Typical Source												
Alpha Activity, Gross	(0)	15	0.235	12/2015								

DETECTION OF CONTAMINANTS WITH A PRIMARY DRINKING WATER STANDARD									
Contaminant(s) (units)	PHG/ (MCLG)	MCL/ (AL)	Level Detected	Sample Date	Typical Source				
Aluminum (ppm)	0.6	1	0.085- 0.278	2015	Erosion of natural deposits; residue from some surface water treatment processes				
Hexavalent Chromium (ppb)	0.02	10	2.1	12/2014	Discharge from electroplating factories, leather tanneries, wood preservation, chemical synthesis, refectory production, and textile manufacturing facilities; erosion of natural deposits				
Nitrate (as N) (ppm)	10	10	0.47	1/2015	Runoff and leaching from fertilizer use; leaching from septic tanks and sewage; erosion of natural deposits				

DETECTION OF CONTAMINANTS WITH A SECONDARY DRINKING WATER STANDARD								
Contaminant(s) (units)	MCL	Range	Level Detected (AVG)	Sample Date	Typical Source			
Aluminum (ppb)	200	85- 278	(181.50)	2015	Erosion of natural deposits; residue from some surface water treatment processes			
Chloride (ppm)	500		33	12/2013	Runoff/leaching from natural deposits; sea water influence			
Color (units)	15		6	12/2013	Naturally-occurring organic materials			
Iron (ppb)	300	242- 590	(416)	2015	Leaching from natural deposits; industrial wastes			
Odor (units)	3		1	12/2013	Naturally-occurring organic materials			
Specific Conductivity	1600		560	12/2013	Substances that form natural deposits; sea water influence			
Sulfate (ppm)	500		38	12/2013	Runoff/leaching from natural deposits; industrial waste			
Total Dissolved Solids (ppm)	1000		310	12/2013	Runoff/leaching from natural deposits			
Turbidity (NTU)	5		4.8	12/2013	Soil runoff			

SUBSTANCES OF INTEREST									
Contaminant(s) (units) PHG/ (MCLG) MCL Level Sample Detected Date Typical Source									
Alkalinity (as CaCO3)	N/A	N/A	200	12/2013	Generally found in ground and surface water				
Sodium (ppm)	N/A	N/A	25	12/2013	Salt present in the water and is generally naturally-occurring				
Hardness (ppm)	N/A	N/A	235	12/2013	Sum of polyvalent cations present in the water, generally magnesium and calcium, and are usually naturally-occurring.				
pН	N/A	N/A	7.92	12/2013	A measurement of acidity, 7.0 being neutral				

Additional Information on Drinking Water

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the USEPA's Safe Drinking Water Hotline (1-800-426-4791).

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. USEPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbial contaminants are available from the Safe Water Drinking Hotline (1-800-426-4791).

Monitoring and reporting violations:

Aluminum and Iron are secondary drinking water standard contaminants and are set to protect you against
unpleasant aesthetic effects such as color, taste, odor, and the staining of plumbing fixtures, and clothing while
washing. These are not health (Primary) constituents.

Summary Information for Fecal Indicator-Positive Ground Water Source Samples, Uncorrected Significant Deficiencies, or Violation of Ground Water TT

None

For Systems Providing Ground Water as a Source of Drinking Water

SAMPLING RESULTS SHOWING FECAL INDICATOR-POSITIVE GROUND WATER SOURCE SAMPLES								
Microbiological Contaminants (complete if fecal-indicator detected) Total No. of Detections Sample Dates MCL [MRDL] [MRDL] Typical Source of Contaminant Typical Source of Contaminant								
E. coli	(In the year)/0	None	0	(0)	Human and animal fecal waste			

System Improvements and Updates:

• The water system plans to develop and execute a corrective action plan for iron and aluminum.

Conservation and Drought Tips:
